

TRAMIGO™

The Best Selling GPS/GSM Tracker in the World.

M1 Fleet Enterprise

UNDERSTAND YOUR FLEET. Tramigo M1 Fleet Enterprise is a client-server application that can be used for tracking, monitoring and managing Tramigo devices installed in your fleet. Recommended for those who are recovery service providers, tracking service providers or anyone who has a large fleet.

- Client-Server Architecture**
 Supports multi-user, remote viewing of data, and other benefits of a client-server deployment.
- Secure Offline Concept**
 Works fully offline without need of the internet. Predownload maps and use SMS via modem when in harsh environment or when high security required.
- History Playback and Snail Trail**
 View the whereabouts of your vehicle connected by line.
- Alert Email Notification**
 Automatically receive an email when there's an alert received from your fleet.
- Live Tracking**
 See your vehicle(s) move on map as it reports position including Tramigo Landmarks (TLD).
- Exporting of Data**
 Ability to create and export reports to an excel or CSV file.
- Supports SMS and GPRS simultaneously**
 The system can process Tramigo device reports via SMS using a GSM modem and via GPRS through public static IP. (Note: T22 supports SMS only while T23 supports both GPRS and SMS)

tracking.
